

Aim 5: Improving data collection so better decisions can be made

*Draft North East Waste and Resource Recovery
Implementation Plan*

North East
Waste and Resource Recovery Group

Why is this important?

The availability of accurate and reliable data is the foundation on which councils and alpine resorts make decisions. Improved data will assist in the development of business cases to assess the viability for the establishment of new infrastructure and systems.

Priority actions to achieve this aim

1. Establish a reliable regional data system to inform waste and resource recovery decisions

- Why? See page 14 of the Plan.
- For 3 short term actions, see page 17 of the Plan.

2. Share information across state government on regional infrastructure and market development needs and priorities

- Why? See page 14 of the Plan.
- For 2 short term actions, see page 17 of the Plan.

What will change and how will it affect me?

This will assist your councils and alpine resorts to work more efficiently and share local waste and recycling information with the state government. This will benefit the community by helping shape future programs.
